---

thanks for the maps, with the poison seeping through the dirt, the pipes are guaranteed to be laying in poison. To due the clean up with out doing a full inspection of the pipes while the equipment is on site would be reckless & dangerous. Simply running that heavy equipment across the soft soil on the pipes could cause a rupture in one of those lines, causing an even bigger disaster. It would be cheaper to do it while the equipment & men are already there.

they are having 1pm meeting at the pits, news,i think & "the Queen of Superfund is talking tomorrow at Lee College, Tucker Hall Building.

thanks for everything

The national average for multiple myeloma (bone marrow cancer) is 1 in 100,000 and there are 7 cases along the San Jacinto River. Baytown Sun. Also Lois Gibbs (a current Nobel Peace Prize nominee) known as the mother of superfund as is famous for her work on the Love Canal Superfund site will be speaking at a workshop put on by the San Jacinto River Coalition at Lee College 11 am on aug 2
